Ansh Sharma

609-375-5451 | anshgs2@illinois.edu | linkedin.com/in/anshgs | anshgs.me | github.com/anshgs

Education

University of Illinois at Urbana-Champaign, GPA: 4.0/4.0 Expected May 2024
B.S. in Computer Science, Minor in Mathematics, Chancellor's Scholar *Champaign, IL*

Work Experience

AbbVie, *Machine Learning Intern – Chicago, IL* Jan. 2022 – Present
- Conducted research on precision medicine using Deep Learning and Image Segmentation with the Pharma Discovery team
- Utilized radiomics/computer vision to track disease progression in PKD-infected mice to quantify treatment responses
- Paired radiomic + genomic data to find potential biomarkers to predict drug response - working to generalize to human data

PeopleWeave (Caesar Lab @ UIUC), *Undergraduate Research Assistant – Champaign, IL* Dec. 2021 – Present
- A networking application to help connect and study interactions between researchers - to be premiered at SIGCOMM 2022
- Designed scraper to collect CS research papers from various databases and a Flask API to provide access to other teams
- Used Semantic Clustering to extract and visualize meaningful information and relations based on research paper content

Molecule Maker Lab Institute, *Undergraduate Research Assistant – Champaign, IL* Jan. 2022 – Present
- Researching accelerating enzyme optimization using machine learning guided directed evolution
- Working on biomedical entity relationship extraction to datamine research papers for future use in deep learning models

NJ Governor's School in the Sciences, *Quantum Computing Researcher – Madison, NJ* July 2020 – Aug. 2020
- Published a research paper on the Qiskit quantum computing framework's ability to execute various quantum algorithms.
- Tested the frameworks accuracy with molecular simulation using the Variational Quantum Eigensolver algorithm
- Designed an original probabilistic oracle to pair with Grover's algorithm in order to optimize solving a partitioning problem

Activities & Honors

NeuroTech@UIUC Aug. 2021 – Present
Software Developer *Champaign, IL*
- Collected data and implemented ML models to control an RC Car using through readings from a brain computer interface
- Utilized PyTorch and scikit-learn to test/train various models including LSTMs, SVMs, KNNs and DNNs
- Reached 93% real-time accuracy in classifying directions based on facial expressions and eye-blinks

Olympiad Awards: Putnam Top 500 - Winter 2020, USA Math Olympiad (USAJMO) Qualifier - Spring 2019, USA Computing Olympiad (USACO) Gold Division - Spring 2019, USA Physics Olympiad (USAPhO) Top 50 - Spring 2021

Research Awards: Regeneron International Science and Engineering Fair Finalist (2021), North Jersey Regional Science Fair 1st Place Computer Science (2021), Nokia Bell Labs Distinguished Research Award (2021)

Selected Projects

Infected & Detected (Top 5 HackIllinois 2022) | *TFLite, OpenCV, Flask, MongoDB* Feb. 2022
- An ML based edge computing tool to help farmers get analytics on their crop health and weed growth over time
- Trained an image classifier using transfer learning on MobileNetV2 to identify different types of plant diseases and weeds
- Used pruning and quantization to shrink model size further by 10x to run on a Rasberry Pi with a Coral Edge TPU

Passport Photo Generator | *Python, OpenCV, Node.js, JavaScript, Express, HTML/CSS* Aug. 2021 – Sept. 2021
- Built a locally hosted website to convert an inputted image into a passport photo satisfying U.S. passport requirements
- Implemented face detection, image rotation, centering, and alignment using OpenCV
- Incorporated the U^2-net deep learning architecture for salient object detection to remove background

Improved Quantum Cryptography with Entanglement & Signatures | *Python, Qiskit* Aug. 2020 – March 2021
- Presented at the 2021 Regeneron International Science and Engineering Fair and the North Jersey Regional Science Fair
- Designed a modification of the BB84 QKD Algorithm to improve on qubit efficiency and prevent man-in-the-middle attacks
- Implemented and tested the algorithm using the Qiskit library to run algorithm on IBM cloud quantum computers

Technical Skills

Proficient: Java, Python, C++, LaTeX, SQL, Linux Shell, Git, Pytorch, Pandas, Numpy, MatPlotLib, OpenCV, Qiskit

Familiar: JavaScript, HTML/CSS, Node.js, Express, Bootstrap, Sass, Catch2, Flask, OpenGL, Tensorflow, Keras
